

Open Up

1. **Open the Observatory** with the key found in the lock box. Put the key back.
2. **Turn on the light** and sign-in in the **logbook**.
3. Unhitch the **roof hold-down latches**.
4. Slide the **roof open**.
5. Remove the **bungie cord** and **plastic cover**.
6. Remove the telescope **dust cover**.
7. Turn on the **dew heater** (if necessary).
8. Insert a **dual band filter** (emission nebula) or a **UV/IR cut filter** (galaxies and star clusters), if necessary.

Power Up and Get Ready (Important: make sure the roof is now open!)

9. **Power up** the mount (wall and mount switch) and the ASiAir device (switch).
10. Plug your **USB drive** into the ASiAir device.
11. Use the handheld controller to **Align the Mount**.
 - a. Press **BACK** (if necessary) until the controller shows **CGE Ready**.
 - b. Press **ENTER** to go to **CGE Ready / Press Enter to Begin Alignment**.
 - c. Press **ENTER** to go to **Set Switch Position**.
 - d. Press **ENTER** and the Telescope will move. Wait until it stops.
 - e. Press **Enter**. Enter the **time (24-hour format), EST or EDT**, Easter Time Zone, **Current Date**. Press **ENTER** each time to go to the next option.
 - f. Press the [#9 SCROLL Down] key to scroll down to **Select Alignment/Last Alignment**. Press **ENTER**. (You do not have to align the mount to a target star.)

Connect and Pre-process

1. Open the ASiAir app  and proceed through to the Main Screen.
2. If necessary, connect to the ASiAir device using your phone or tablet's Wi-Fi settings. Use the password "12345678".
3. Open the Storage settings . Click and **choose your USB Drive** rather than eMMC.

4. **Auto-Focus the telescope**. Click on the AF button over on the left.
5. Take your **flat and bias calibration** frames before taking images.
6. Tell the ASiAir to use the flat and bias frames. [Need more here](#).

Take Images

7. **CHOOSE AN OBJECT**
 - a. Click on the "Big Dipper" icon  to choose an object to image.
 - b. Choose an object to image. If necessary, use your finger to adjust the view.
 - c. Wait for ASiAir to plate solve and find your object.
 - d. Return to the previous screen.
8. **PREVIEW YOUR IMAGE**
 - a. Choose Preview from the drop down 
 - b. Click [EXP] to choose an exposure time (say 3 sec) 
 - c. Click on the Preview button 
 - d. Return to the previous screen.
9. **SET A GUIDE STAR**

FAS Observatory Checklist

- a. Click on the graph  in the top left to set a guide star.
 - b. Click refresh  and then the “target” button . ASiAir will find a guide star.
 - c. Wait for the graph at the bottom to track and show low numbers.
 - d. If the guide scope is not tracking (high numbers), repeat from step b.
 - e. Return to the previous screen.
10. START TAKING IMAGES
- a. Choose Live from the drop down .
 - b. Click on the Live button .
 - c. Click on the menu button  to choose your settings (Light, EXP, Save Every Frame).
 - d. Click on the big white button  to start taking images.
11. STOP TAKING IMAGES
- a. Click on the big white button  to stop taking images.
 - b. Click on the SAVE button  to save the final stacked image.
 - c. Click on the BRUSH button  to clear images and start over.
12. STOP GUIDING
- a. Click on the graph  in the top left to stop the guiding.
 - b. Click the red stop button .
 - c. Return to the previous screen.

Shut Down

18. Take you dark calibration frames before shutting everything down.
19. From the app “Files” screen  use  to **eject your USB drive**.
20. From the app “Wi-Fi” screen  use  to **shut off the ASiAir device**.
21. Use the handheld controller to **Home the Telescope**.
 - a. Press BACK (if needed) until the controller shows **CGE Ready**.
 - b. Press the [#7 Menu] Key.
 - c. You will see **Menu / Utilities** -> Press Enter.
 - d. Press the [#9 SCROLL Down] Key until you see **Utilities / Home Position**.
 - e. Press Enter and you will see **Home Position / Goto**.
 - f. Press Enter and the mount will go to the home (horizontal) position.
22. Turn off the **dew heater**.
23. Remove any filters.
24. **Power off the ASiAir device** using the switch.
25. **Remove your USB drive** from the ASiAir device.

Close Down

23. **Turn off the power on the mount.**
24. **Turn off the power on the wall.**
25. Place the **handheld controller** in its storage position.
26. Replace the main telescope **dust cover**.
27. Replace the **plastic bag** over the Telescope and secure it with the **bungee cord**.
28. Move the **roof to the closed position**.
29. Hook the **roof hold-down latches** on both sides.
30. Sign-out in the **logbook** and **turn off the light**.
31. **Close the door** to the observatory. Make sure it is **locked**.
